

Seamless 4-Port HDMI Switch with Quad Multi-View

DESCRIPTION:

The SSW-HD-4 is a 4 input HDMI seamless switch with Quad Multi-View capability. The output resolution can be set independent of the inputs. Both HDTV and PC output resolutions are selectable. The unit also de-embeds the audio from the selected HDMI source (digital SPDIF RCA connector).

As a multi-viewer, it can show the inputs in various window configurations (4 equal size windows, or one large window with 3 smaller ones). The output mode, resolution, and input selection can be selected using 3 methods. (1) Front panel buttons, (2) IR remote (included), or (3) RS-232 commands.

Applications include command and control centers, presentations, and sports bars. For example, a large 80 inch can be used to display 4 sources simultaneously (as a quad view).

FEATURES:

- Totally seamless switching among inputs
- Separate Digital Audio Output (LPCM/AC3/DTS)
- Scales output to fixed resolution independent of inputs
- Multi-view modes allow viewing of all inputs in real time (60 frames/sec)
- Multiple Viewing Modes
- Includes IR remote
- RS-232 control of all functions
