

### two channel radio interface with RTS OMNEO/DANTE access

- Analog / digital permanent transmission
- 2 simplex channels or 1 semi-duplex channel
- Easy access with RTS Intercom Matrix (ADAM, ODIN)
- Switchable to Analog Audio In- and Outputs including vox-detection or PTT
- Radio Motorola VHF or UHF Band

### Technical features:

- Provides an interface between legacy RTS keypanels and RTS OMI OMNEO interface cards for ADAM, ADAM-M and ODIN units.
- Support for both USOC or 586B wiring.
- Provides less than 20 ms of audio latency in typical network installations.
- Provides a frequency response of 20 Hz to 20 KHz to the keypanel.
- Supports DHCP and device discovery for easy set up and network management.
- Optional fiber connection – multi-mode or single-mode available.
- Supports CAT-5/5e and CAT-6 with dual Ethernet connectors for device looping.
- Supports compatibility with third-party Dante™ products and ST2110-30 protocols available from numerous suppliers.
